

IF BUMSTEAD WANTED TO GO INTO MASS PRODUCTION HE'D CALL US.

Let's say Bumstead was having trouble keeping up with the demand.

Opcon could help.

We'd help him build an automated, self-monitoring, coin-operated Dagwood Sandwich Maker.

Think we've been eating too many pepperonis?

No sir. Imagine a microprocessor-controlled, sandwich elevator riding up and down three flights of delicately equipped conveyors. At the top is a parmesan shaker, sardine dispenser, and of course, our patented and highly proprietary proportional mustard/ketchup/ mayonnaise applicator.

The customer names his pleasure, and the microprocessor takes over. Using Dagwoods' carefully prepared gastronomic logic the selections are programmed. Opcon optical controls and logic devices position, activate, deactivate, spread, shake and fill as required.

Simple, huh? And delicious! And not as far-fetched as you might think, once you know all the things Opcon can do.

For years, our engineers have been combining advanced optical controls and logic devices to help position, activate, spread, shake and fill everything from beer bottles to five-ton logs.

To accomplish these processes, the engineers call upon an array of modular logic devices and optical controllers. They might use anything from microprocessor-equipped scanners, to one of our new Blue Eyes™ sensors, the size of a common mechanical limit

switch. Their power options range from tiny fiber-optic sensors to heavy-duty giants that can pick out an olive on a Dag's Special at 200 feet.

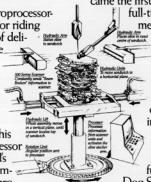

And to explain how these products become sandwich makers, beer fillers, label stickers or inventory controllers—we became the first company in our field with a full-time, high-tech training department for our reps and distributors.

By now there's an Opcon specialist in just about every nook and corner of North America, ready to look at your productivity or quality control problems and work with our engineers to design unique, imaginative solutions for you.

Who knows? Maybe there's an Automatic Dagwood Sandwich Maker in your future. A Self-Actuating Hot

Dog Steamer? How about a Self-Adjusting Package Inserter? To find

out, call an Opcon Applications Engineer Today.
